

Bangor School District
“Green” Projects/Practices

District-wide, students are leading the recycling of aluminum cans and paper.

Boxes are set next to copy machines/printers containing scrap copies with blank sides that can be re-used.

We have installed energy-efficient lighting in the new elementary addition, and are planning to systematically replace other lighting.

The elementary school is planning an art show and ice cream social for Earth Day.

We are moving to online transportation and facility request procedures to reduce paper use.

We communicate with parents using email whenever possible to reduce the use of paper.

Our High School Technology Education class has built a wind generator to help power some of their tools.

Many classes have students keep their work on “jump drives” to eliminate the use of paper.
